

## Imagery Analyst Job Description

The Data Analyst/ Processor will provide image science support to USG by performing detailed processing and exploitation (PED) of specific data. The Data Analyst/ processor will prepare and present derived products using COTS applications like Google Earth and other Geospatial-specific tools to support USG objectives. Training will be provided for any atypical applications or toolsets which may be required during deployment.

### Qualifications

Must have:

- US Citizen
- Must hold a current Top Secret Clearance valid for at least one year upon employment
- Past experience demonstrating an ability to operate in austere environments
- Creatively solve problems with limited resources
- Minimum a bachelor's degree (or 4 additional years of direct experience)
- Willingness to complete Pre-Deployment Training
- Must be able to obtain a FAA Class II Medical

Preferred:

- Prior experience in Afghanistan, Iraq or other areas of conflict is essential
- Military experience with background or training in imagery analysis

Responsibilities:

- Will provide image science support to the Special Operations
- Will prepare and present CAT derived products
- Help prepare appropriate CAT-specific collection strategies
